03 IsarPunks

By October 2026,

Windows 10 reaching its final End-of-Life .

We will dump 240 million PCs.

That's a tower of trash 600km high enough to reach the Starlink satellites.

But there is hope

You are Gen Alpha,

You are the first generation that hasn't just watched the future; you've built it.

You've already designed Solarpunk cities in Minecraft and Roblox.

Welcome to IsarPunk.

02 The Way

03 IsarPunks

WHY NOW?

While Windows 10 support officially ended globally in 2025,

residents of the EU (EEA) were granted a final "grace year" of free Extended Security Updates (ESU) until October 13, 2026.

The US vs. EU Reality:

- US: only ~34.7% of PCs are on Windows 10.
- In Germany, 48% of private households (21 million devices)

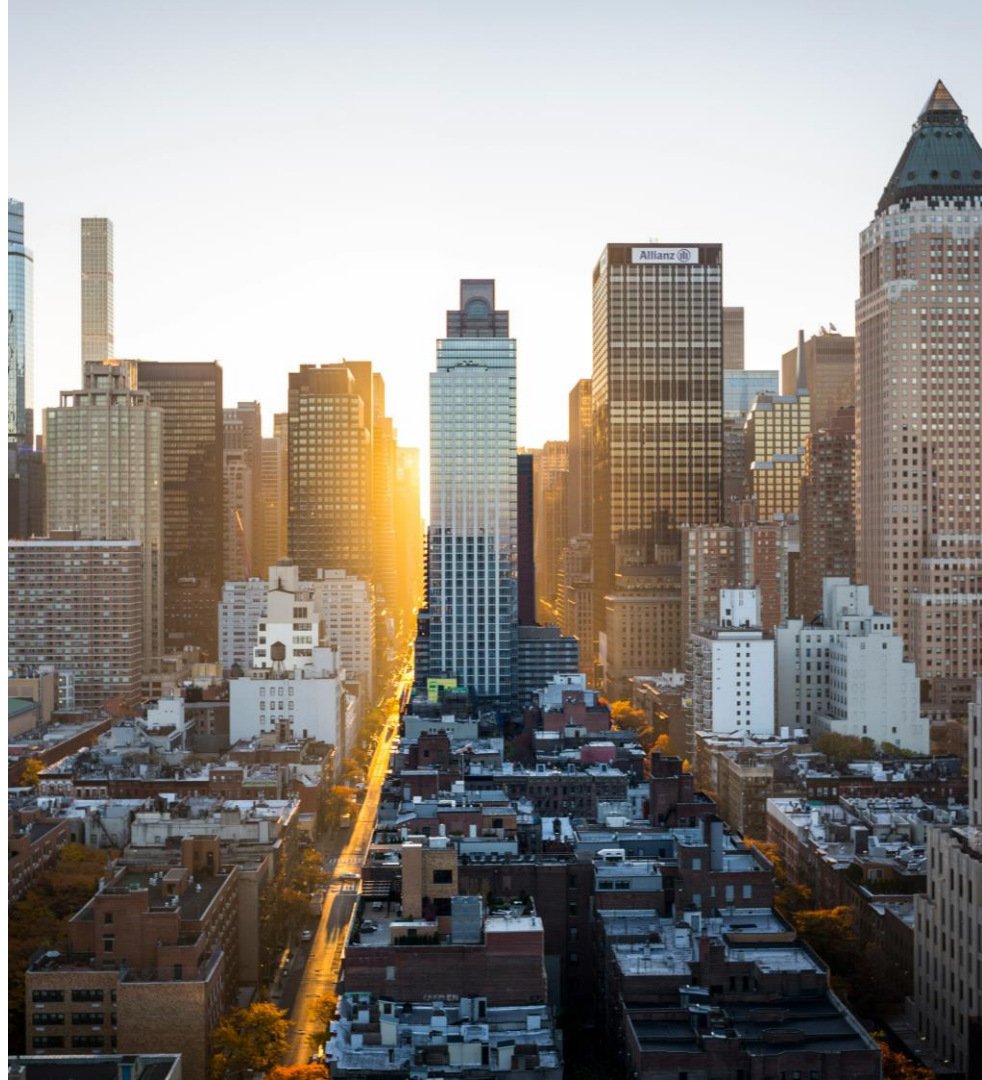

US Experience

2025 Nov. - 2026 March

1.6 million tons of extra electronic waste projected

Massive catalyst for the U.S. urban mining sector, which is forecast to grow into a \$45.3 billion market by 2032.

Systems face severe cybersecurity risks, as advanced threat actors actively exploit unpatched vulnerabilities using sophisticated zero-day attacks.

The Crisis will start in June 2026

2011 hardware will not get Secure Boot certificates anymore

They will start but will be unable to receive future security updates.

You can force Windows 11 onto unsupported hardware;

BUT

Microsoft is adding desktop watermarks and may block security updates entirely.

Seniors are the most exposed.

21 million private PCs in Germany are at risk

Cybercriminals target unpatched systems used by the elderly

- ransomware,
- phishing and
- identity theft.

Seniors are less likely to notice the "software cliff"

But YOU can save Oma and Opa.

The background of the slide is a photograph of the Munich skyline, featuring the prominent twin towers of St. Peter's Church and the illuminated dome of the Frauenkirche, viewed through a dense layer of green trees. A series of concentric circles, resembling a ripple effect, are overlaid on the right side of the image, centered around the Frauenkirche.

The Way Forward: Free Open Source Software

Linux

Created in the 90s by a student Linus Torvalds, Linux is the "people's code." It's owned by the community.

You're already using it. Linux powers 100% of:

- the world's top 500 supercomputers
- International Space Station, and
- every Android phone on Earth.

Everyday Heroes

Linux Mint

Classic, fast, rock-solid.

"Near-zero learning curve."

If you can use Windows 7/10, you are a master of Mint in 5 minutes.

It revives "trash" laptops with very low RAM usage.

Zorin OS

Modern, sleek, "Aura" maxed out.

Want your PC to look like a MacBook?

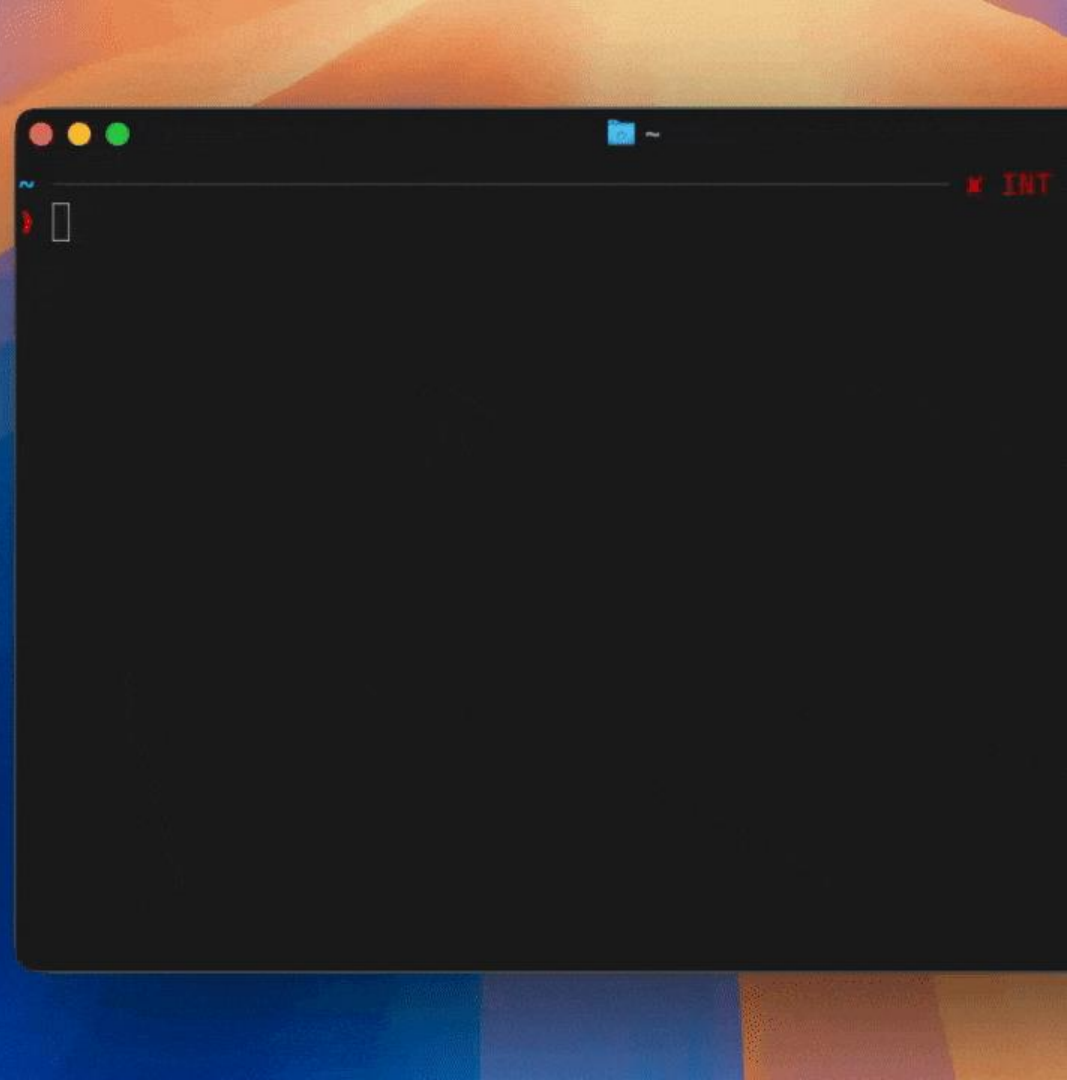

A Windows 11 PC? A futuristic tablet? Just click a button.

The "Final Boss" Defeated

The Linux "Terminal"

Have AI as your tutor.

- 'uwu' Terminal Helper: This tool uses AI to convert natural language into commands.
- Local AI Troubleshooting: You can now pipe your system logs directly into local AI models that explain errors in "plain English".

Gaming & High Performance

Gaming is Great: Over 24,000 games are now verified or playable on Linux via Proton (Valve's magic compatibility layer).

Steam Deck DNA: If you like the Steam Deck, you already love Linux - it runs on SteamOS.

Pro Creator Gear:

- **DaVinci Resolve:** Hollywood's favorite video editor runs natively on Linux.
- **OBS & GIMP:** Stream like a pro and edit photos for free without monthly "Creative Cloud" taxes.

But I need my Office Apps!

- Winboat gives you a perfect copy of windows running inside Linux.
- Microsoft 365 Web Apps run perfectly in a Linux browser like Firefox or Vivaldi.

The "High-Octane" Warriors

Bazzite

Steam Deck vibes on a desktop.

"Atomic System."

It is virtually impossible to break.

"If a weird update glitches your game, you can rollback to exactly how it was 24 hours ago in seconds."

Garuda Linux

Neon "Dragonized" aesthetic, high performance.
Automatically tuned for maximum FPS.

"It is built for those who never want to see a lag spike again."

The Mad Scientists

NixOS

Your entire computer is a single text file.
Bit-for-Bit Reproducibility.

"You can copy one file to a new PC, and it will rebuild your entire setup - apps, wallpapers, and settings - perfectly every time."

Qubes OS

Hyper-security for those who trust no one.
Security by Isolation.

"Every app (browser, files, chat) runs in its own invisible "Cube."
If a virus hits your browser, it literally cannot touch your files. "

Now you know the Lore:
Windows 10 Obsolescence

Now you have a Weapon:
Linux and free and open-source software

Let's talk about the mission !

Operation: "Save Oma"

Unpatched Windows 10 is a magnet for ransomware, malware and phishing.

Step 1: Talk to them!

Step2: Install a Linux version they need!

The Reward:

- A lightning-fast PC,
- secure family data,
- legendary grandchild status.

Operation: Upcycle Economist

Turn E-Waste into Gold:

Abandoned laptop (€0) + Linux OS (€0) = Speedy machine (€150+ value).

Beat the RAMpocalypse:

Windows idles at 4GB RAM. Linux idles at 1GB.

By changing your software loadout, you instantly free up 5-16GB of RAM Upgrade for €0.

Beat the GPU Crisis with Cloud GPUs

- Amazon Luna: €0 (with Prime) | Luna+ is €9.99/mo.
- GeForce Now: €0 (Free) | €10.99/mo | €21.99/mo
- Boosteroid (EU): €9.89/mo | €14.99/mo
- Xbox Game Pass Ultimate: €26.99/mo (400+ games).
- Shadow PC (EU): €32.99/mo (Full Windows PC Stream).

4+ years of premium cloud gaming = 1 mid-range PC

Operation: IsarPunk

Use discarded tech to build your own solutions.
Take responsibility of our life online and offline.
Take the control back !

Step 1: Pick a project !

Step 2: Do It !

- 🔵 Build your network Shield (Pi-Hole/Tailscale VPN)
- 📺 Build your own Netflix (Jellyfin/Plex/Audiobookshelf)
- ☁️ Build your own Cloud (Nextcloud/Immich/Blinko/Kiwix)
- 🖨️ Build your Home Network
(Print server/Wifi Booster/Home Assistant)
- 🎮 Build your Arcade (24/7 Minecraft server/Retro gaming)
- 🧪 Become a Mad Scientist (Jupyter Lab / GNU Octave)
- 💬 Hack social media (Revolt/Matrix+Element)

Who can help you

- **MuCCC (Chaos Computer Club München)** * *Location: Maxvorstadt (Schleißheimer Str. 39)*
- **FabLab München e.V.** *Location: Westend (Gollierstraße / Trappentreustraße)*
- **Erfindergarden (Münchner Repair-Café)** *Location: Fat Cat (former Gasteig at Rosenheimer Platz)*
- **Conodi** *(Laim - Willibaldstraße 27)*
- **comfox computer** *(Sendling - Hansastraße 77)*
- **Notebook Service München** *(Zentrum - Arnulfstraße 20)*
- **PC MAC Reparatur** *(Maxvorstadt - Nymphenburger Str. 32)*
- **Amhaimar IT** *(Sendling - Schäftlarnstraße 10)*
- **FIXstudio** *(Lilienstraße 42, 81669 München)*

Reference Sheet

- E-Waste caused by Windows 10 EOL:

https://www.researchgate.net/publication/397020633_The_End_of_Windows_10_and_the_Rise_of_Digital_Waste_A_Global_Technological_Dilemma

Correction: The geographic claim is definitively false. A 600km tower comfortably reaches Low Earth Orbit (LEO), but the Moon is approximately 384,400km away.

- Win 10 EOL timing: <https://www.windowslatest.com/2026/01/27/windows-10s-extended-support-ends-in-eight-month-but-users-are-still-rejecting-windows-11-at-least-in-germany/>
- Crisis will start earlier: <https://softwarelicense4u.com/us/windows-10-extended-security-updates-esu-2026-guide/>
